### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward W. Tracy, Jr. on Monday, April 13, 2009.

The application has been amended as follows:

Claim 13 (Currently Amended): A ~~computer-readable medium~~ storage medium ~~encoded with computer-executable instructions, wherein the instructions, when executed~~ accessed by a processor, cause the processor to perform a method comprising: searching associated information from a database storing a plurality of associated information concerning an on-air program broadcasted by a broadcasting station; accepting an acquisition request for the associated information from a broadcast receiver to receive a broadcast signal for the program; setting the associated information stored in the database with timing to accept the acquisition request as transmitted information; assigning a service session ID to the broadcast receiver and a valid period for the service session ID, said service session ID assigned at each acquisition request to identify a current communication connection; performing an authentication process on the acquisition request based on the session ID and valid period, said authentication process failing when the valid period is expired; transmitting the associated information to the broadcast receiver if the authentication process is successful; and when the on-air program changes to a

Art Unit: 2618

next program, resetting the transmitted information as associated information of the next program for transmission.

Claim 14 (Currently Amended): The ~~computer-readable medium~~ storage medium according to claim 13, wherein when the on-air program changes to a next program, the resetting removes the transmitted information until the program changes to the next program.

Claim 15 (Currently Amended): The ~~computer-readable medium~~ storage medium according to claim 13, wherein the resetting changes the transmitted information until changeover to the next program to associated information concerning the next program.

Claim 16 (Currently Amended): The ~~computer-readable medium~~ storage medium according to claim 13, wherein the database stores the associated information concerning a production which differs from the on-air program and is broadcast in the program; and the resetting changes the transmitted information to associated information concerning the new production when a next new production starts being broadcast.

Claim 17 (Currently Amended): The ~~computer-readable medium~~ storage medium according to claim 13, wherein when the on-air program changes to a next program, the resetting removes the transmitted information concerning the production which was transmitted at the transmitting until the program changes to the next program.

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

**Claims 18 and 21** have been cancelled.

**Claims 1-17, 19-20, and 22** are allowable.

Consider **claim 1**, the best prior art of record found during the examination of the present application, **Mackintosh et al (US Patent # 6,317,784 B1)** in view of **Song et al (US 2003/0211843)**, fails to specifically disclose, teach, or suggest searching associated information from a database storing a plurality of associated information concerning an on-air program broadcasted by a broadcasting station; accepting an acquisition request for the associated information from a broadcast receiver to receive a broadcast signal for the program; setting the associated information stored in the database in accordance with timing of accepting the acquisition request as transmitted information; assigning a service session ID to the broadcast receiver and a valid period for the service session ID, said service session ID assigned at each acquisition request to identify a current communication connection; performing an authentication process on the acquisition request based on the session ID and the valid period, said authentication process failing when the valid period is expired; transmitting the associated information to the broadcast receiver if the authentication process is successful; and when the on-air program changes to a next program, resetting the transmitted information as associated information of the next program for transmission.

**Claims 2-7** are allowable because it is dependent upon independent claim 1.

Consider **claim 8**, the best prior art of record found during the examination of the present application, **Mackintosh et al (US Patent # 6,317,784 B1)** in view of **Song et al (US 2003/0211843)**, fails to specifically disclose, teach, or suggest a database configured to store a plurality of associated information concerning an on- air program broadcasted by a broadcasting station; a searching unit configured to search the database for associated information concerning the on-air program broadcasted by the broadcasting station; an acceptance unit configured to accept an acquisition request for the associated information from a broadcast receiver to receive a broadcast signal for the program; an assignment unit configured to assign a service session ID to the broadcast receiver and a valid period for the service session ID, said service session ID assigned at each acquisition request to identify a current communication connection; an authentication unit configured to performing an authentication process on the acquisition request based on the session ID and the valid period and provide an indication that the authentication process was successful or unsuccessful, said authentication unit indicating that the authentication process was unsuccessful when the valid period is expired; a transmitter configured to read the associated information stored in the database synchronously with timing to accept the acquisition request by the acceptance unit as transmitted information and to transmit the associated information to the broadcast receiver if the authentication unit indicates that the authentication process was successful; and a resetting unit configured to reset the transmitted information which should be read from the database for transmission when the on-air program changes to a next program.

**Claims 9-13** are allowable because it is dependent upon independent claim 8.

Consider **claim 13**, the best prior art of record found during the examination of the present application, **Mackintosh et al (US Patent # 6,317,784 B1)** in view of **Song et al (US 2003/0211843)**, fails to specifically disclose, teach, or suggest searching associated information from a database storing a plurality of associated information concerning an on-air program broadcasted by a broadcasting station; accepting an acquisition request for the associated information from a broadcast receiver to receive a broadcast signal for the program; setting the associated information stored in the database in accordance with timing of accepting the acquisition request as transmitted information; assigning a service session ID to the broadcast receiver and a valid period for the service session ID, said service session ID assigned at each acquisition request to identify a current communication connection; performing an authentication process on the acquisition request based on the session ID and the valid period, said authentication process failing when the valid period is expired; transmitting the associated information to the broadcast receiver if the authentication process is successful; and when the on-air program changes to a next program, resetting the transmitted information as associated information of the next program for transmission.

**Claims 14-17, 19-20, and 22** are allowable because it is dependent upon independent claim 13.

### ***Conclusion***
